

Here is the guide of design your HelloWorld Agent.

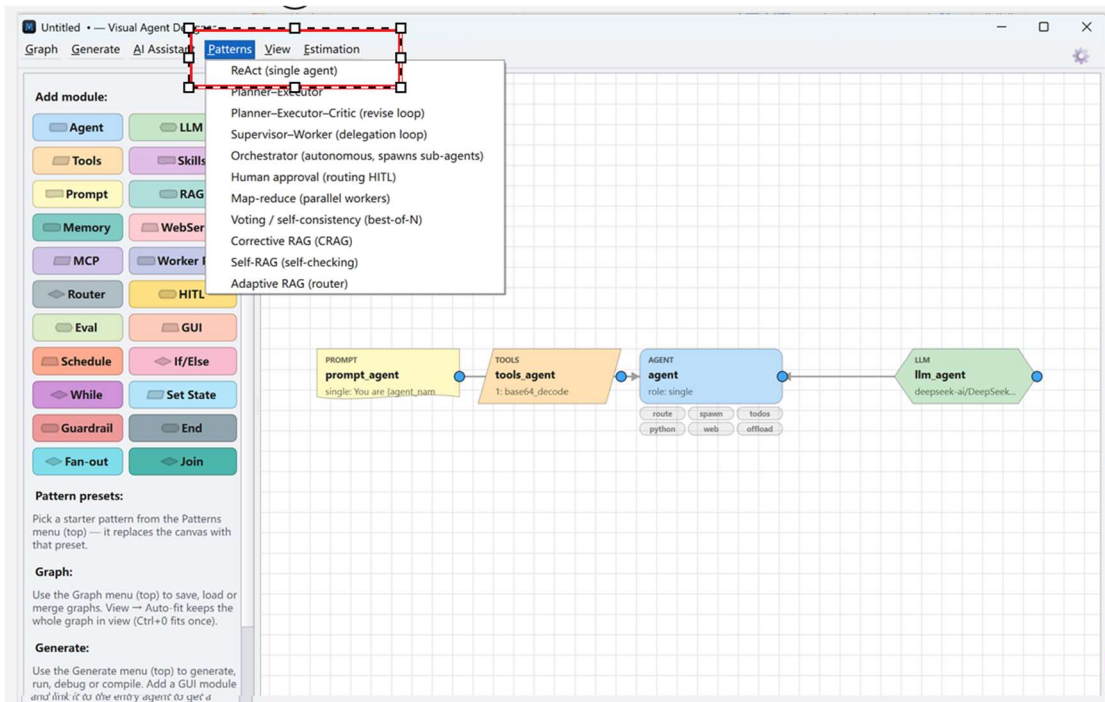

## 1. Open the executable

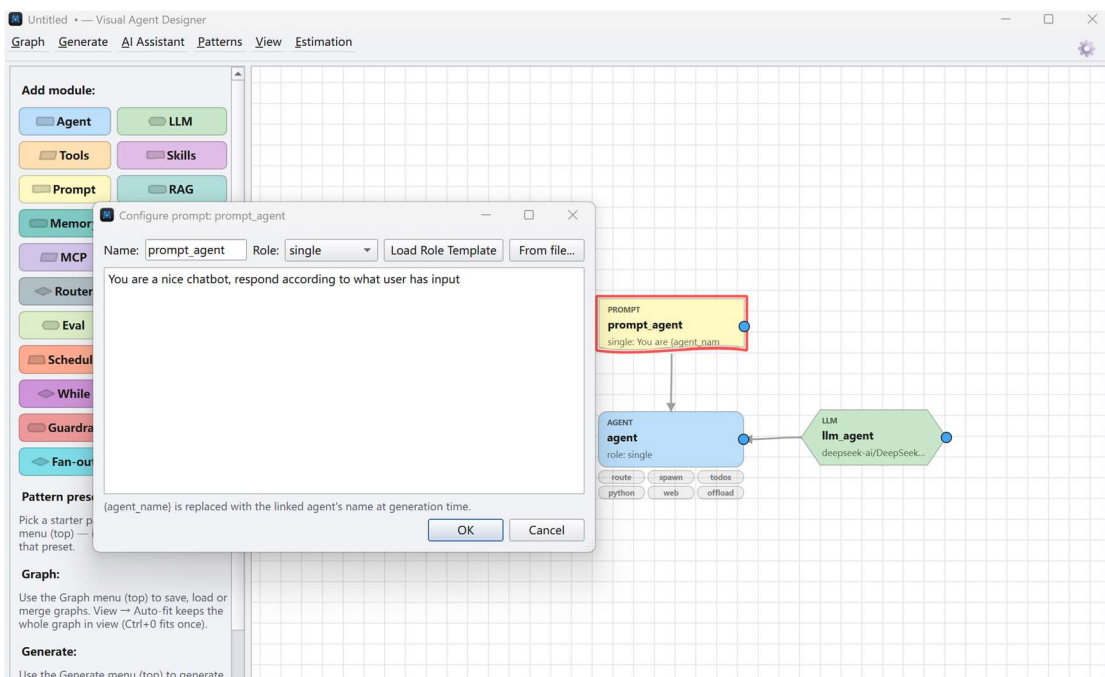

## 2. Click “New project” to get into the design canvas, and then click the gear to fill your API-Key, URL

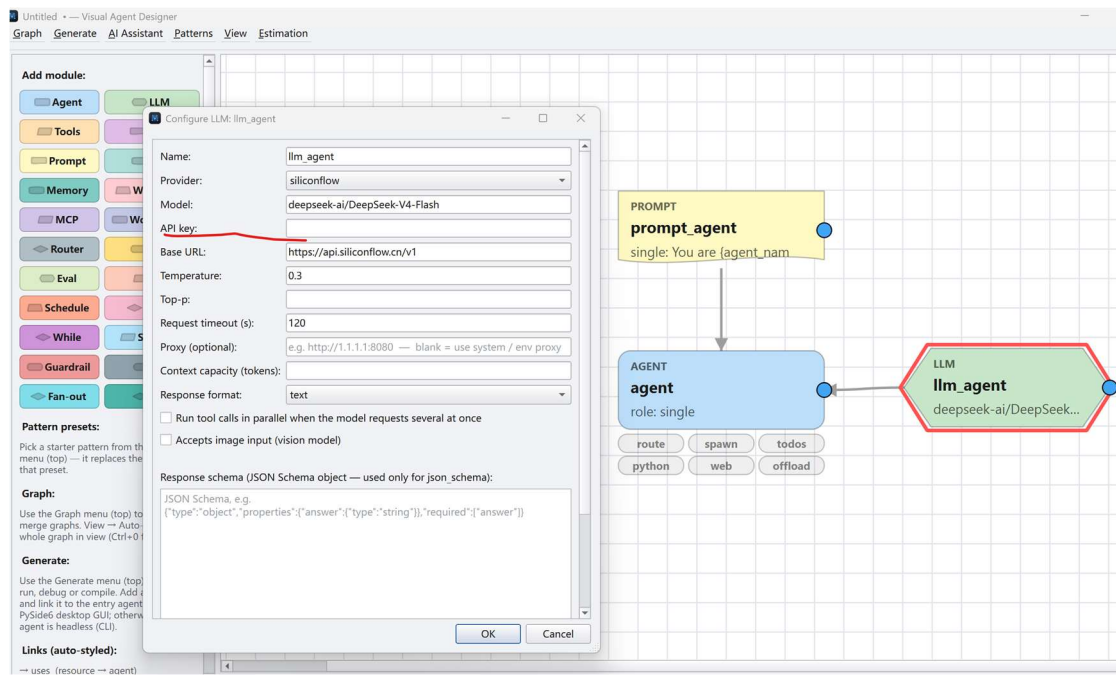

### 3. Load a preset React pattern in the Pattern Menu

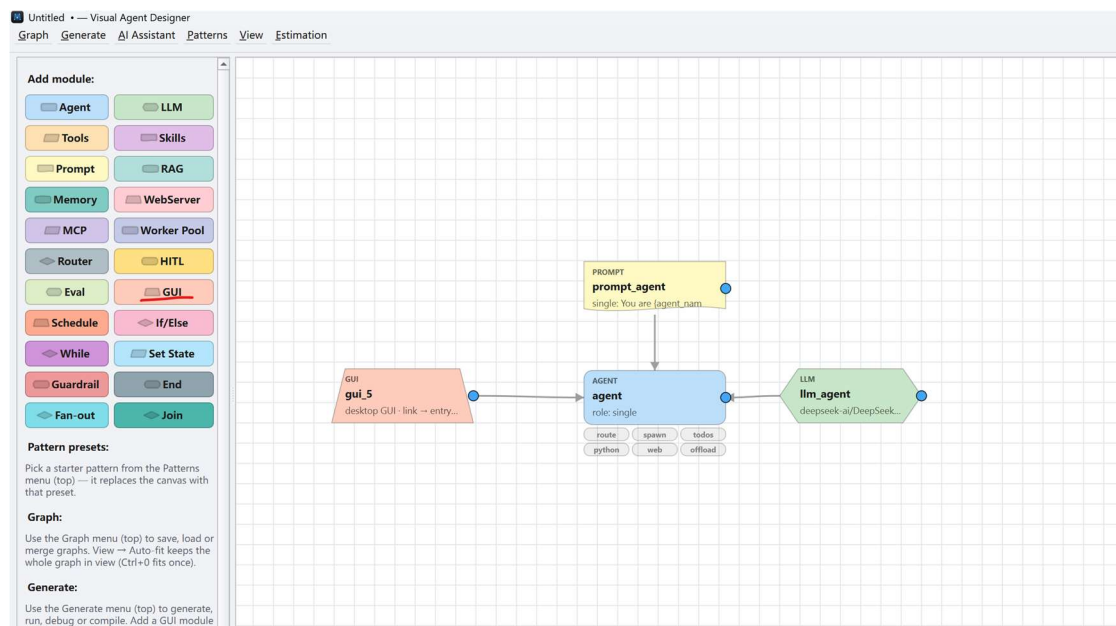

### 4. Change the system prompt by double clicking the prompt\_agent.

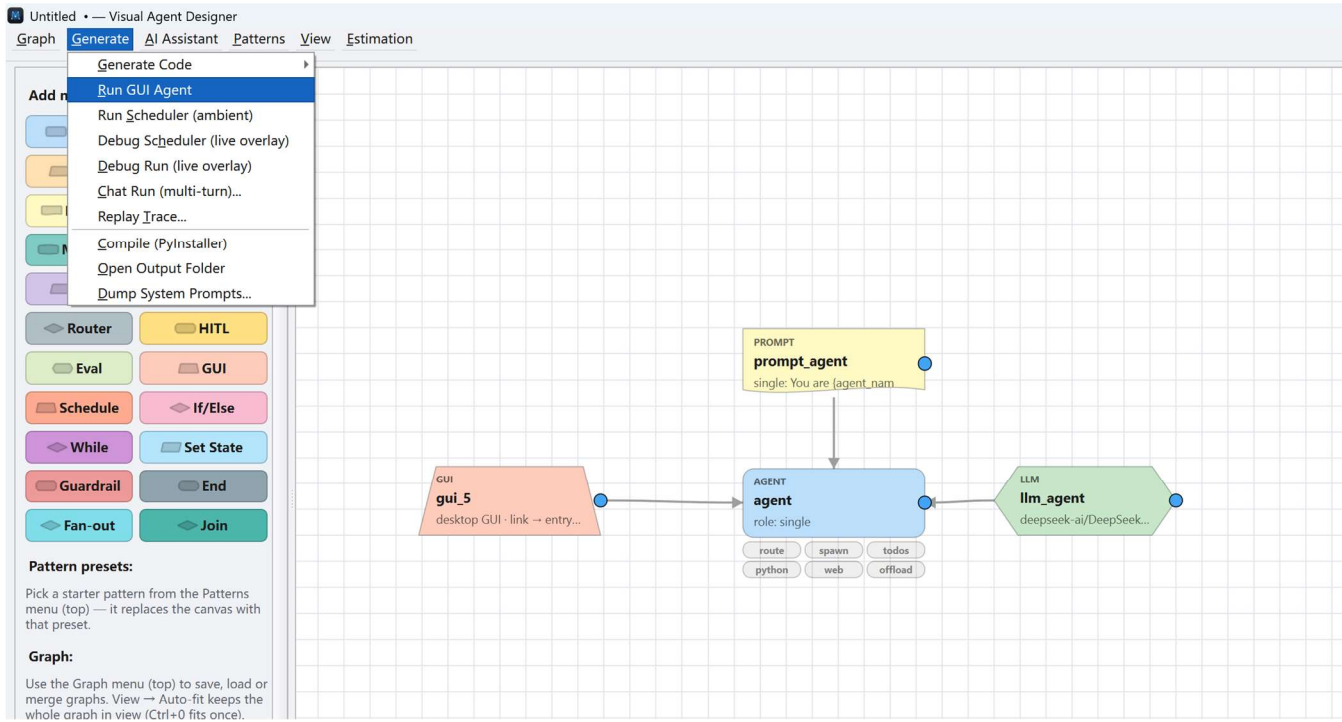

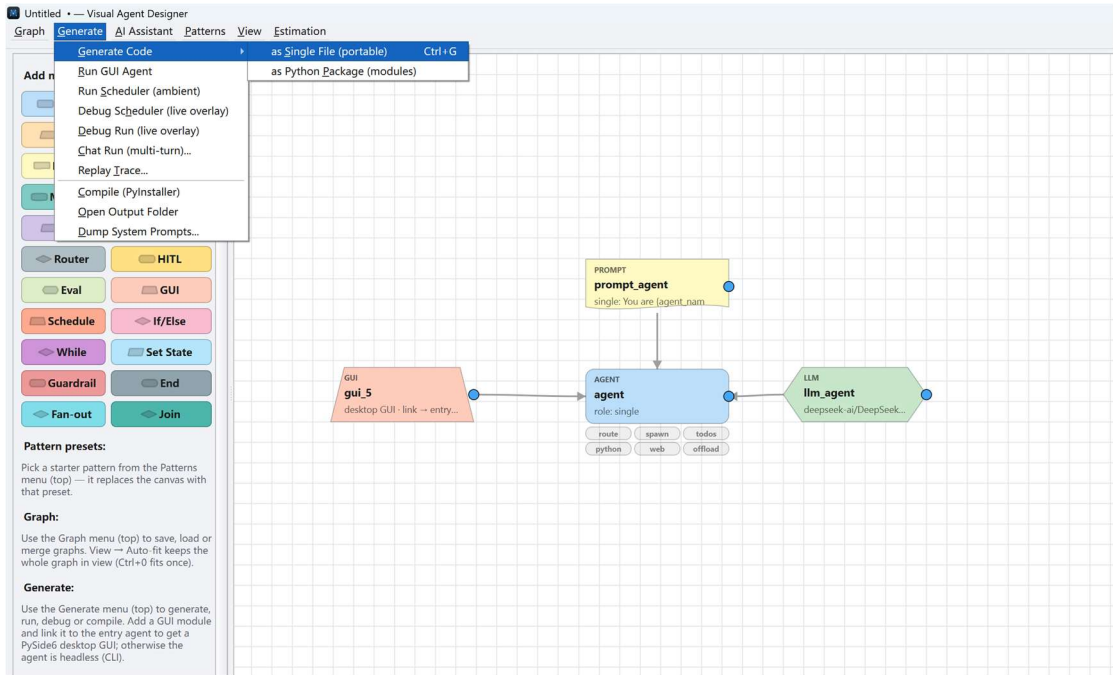

5. Fill the api-key to the LLM Node or just leave it empty.

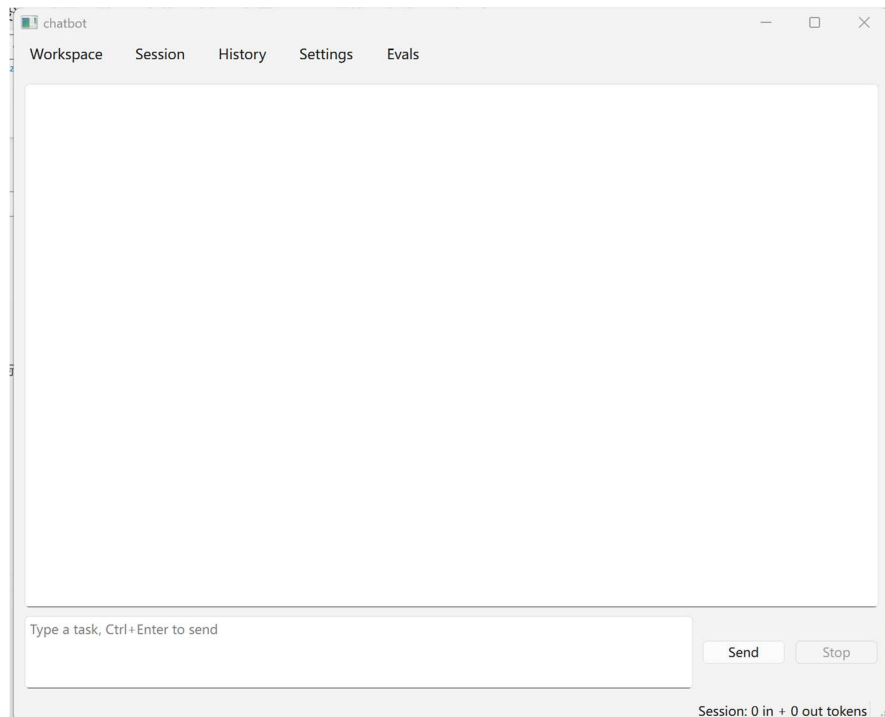

6. Add a GUI Node and link it to Agent Node, and now the graph is complete.

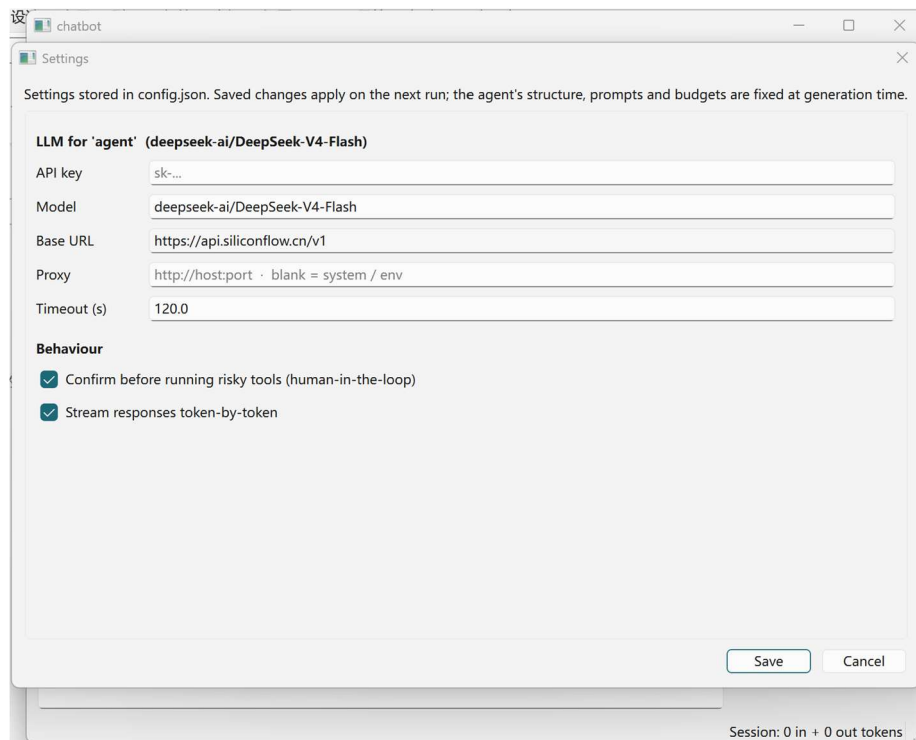

7. You can now generate the codes and run your 1<sup>st</sup> Agent. Give a name to your Agent.

8. The UI seems to be ugly, but don't worry, you can design your own UI in future.

Fill the API-KEY if you forget to set it when design the graph

## 9. Now talk with your new toy
